

Claims

What is claimed is:

1. A rake comprising:
an extendable handle;
a rake head pivotally attached to said handle; and
a spike coupled to the rake.
2. The rake according to claim 1, wherein the rake head is configured to be pivotally moveable between a position parallel to the handle and a position perpendicular to the handle.
3. The rake according to claim 1, wherein the spike is attached to the rake head.
4. The rake according to claim 1, wherein the spike is attached to the handle.
5. The rake according to claim 1, wherein the handle is comprised of at least two sections with complementary cross sections whereby one section fits within the other.
6. The rake according to claim 2, wherein the rake head is retained in the position parallel to the handle by a first retaining mechanism coupled to the rake head.
7. The rake according to claim 2, wherein the rake head is retained in the position perpendicular to the handle by a second retaining mechanism coupled to the rake head.

8. A sand trap rake for smoothing sand in sand traps, the rake comprising:
- an extendable handle;
 - a rake head pivotally attached to the extendable handle, the rake head configured to be movable between a position generally parallel to the handle and a position generally perpendicular to the handle; and
 - a spike attached to an end of the rake head.
